This letter is in regards to the traffic and weather information on the XM radio. This is a service that I myself pay for and I don't see how they should be able to regulate what they broadcast. The information is vital to my business as an over the road truckdriver. XM gives us up to date information on the spot as to weather and traffic problems where as the regular radio you either have to wait every 15 minutes or half hour for the information, but you can only get that info when you get close enough to the city to pickup the radio station. XM we get the information on the cities well before we can pickup FM or AM bands so we can make plans to avoid the area of problems. This will lesson the amount of traffic congestion and cut down on traffic backups and fender benders that always seem to happen to traffic tie ups. This is an important tool to our everyday job. But XM is not only limited to the truckdrivers who have it but also to the everyday people driving there cars and loved ones at home that have XM they can call their spouse and warn them of the problems so they get home safe. Taking this away or regulating this vital tool from XM would be the most injust thing I could see. On the stand point of safety that we as drivers hear everyday, taking this away would be compromising safety all in the name of the all mighty dollar. Because this is all it boils down to is money. I pay for this service and I should be able to get what I pay for and that includes traffic and weather for all major cities and areas in between. Thank you Very Much.  
Mr & Mrs Hayward
